

HOMESAFE S2 30P

UPDATED VERSION WITH MAJOR IMPROVEMENTS – NOW AVAILABLE

The HomeSafe S2 30P has now been upgraded with many advantages. This is what's new:

1. REAR FIXING AS STANDARD

Suitable for installing in multiple areas of the home and office without losing fire certification. Unlike many safes on the market today in this segment you can anchor the HomeSafe S2 30P via two rear anchor points and retain that all important EN 15659 LFS 30P fire certification.

2. UPGRADED BASE ANCHORING

Anchoring bolt heads now sit below the level of the interior base allowing for a better storage solution.

3. UPGRADED ELECTRONIC LOCK

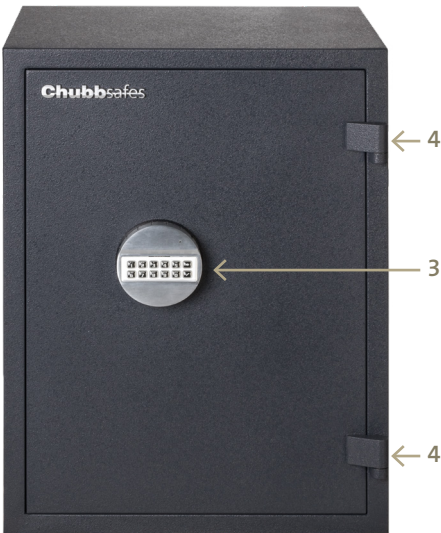

Now using the Pulse 2 lock, the keypad housing is now a stylish and durable all metal casting. The keypad utilises a long life, rubber membrane to ensure years of trouble free use under normal conditions.

4. IMPROVED HINGES

Hinges are now a single piece casting for a more consist and cleaner design.

5. EXTENDED SHELF POSITIONS

The models M-50 and above include further shelf positioning points to give extra flexibility when storing bulky or small items. The shelves supplied as standard can be adjusted to allow more space for individual, large items or by purchasing an additional shelf, organisation of smaller items can be improved.

INCREASED STEEL BODY THICKNESS

We have made the HomeSafe S2 30P more robust, yet it still remains the lightest product by volume with recognised independent certification at EN 14450 S2 burglary, EN 15659 LFS 30P levels and combined with rear certified fixing – at least 30% lighter against current alternatives.
